

# HABITAT GARDEN

Perennial Garden Collection

## A Haven for Butterflies *and* Hummingbirds

As pleasing to the eye as it is to its winged visitors, this garden shimmers in scarlet, purple, orange, and yellow, the vibrant colors most attractive to hummingbirds and butterflies. The selected perennials also feature fragrance and special characteristics—clusters of small flowers and tubular forms—essential to drawing your small guests. The Butterfly Bush (*Buddleia*) and *Caryopteris* shrubs provide shelter for delicate butterfly wings on windy days. Don't forget to provide a source of water; butterflies prefer sipping from a shallow container filled with gravel and water. And place a few attractive flat stones in your garden where butterflies can bask in the sun. For optimal results, hang a hummingbird feeder near your garden, since these tiny birds must feed almost non-stop. Plant this garden in full sun for best results; more than a few hours of shade will result in decreased flowering and less vigorous growth. The ornamental grasses have been included to lend grace, texture, and year-long beauty to your garden. Plant in groups of three except where indicated.
